Demo. online for free. Family diversity is a meaningless modern (1970) term. Family is a social and biological structure consisting of few models: Husband (male) + wife (female) + children = family. Husband (male) + wives (females) + children = not that traditional family. The basic purpose of a family is to produce children and bring them into an adulthood. All other combinations in relationships are there solely for egotistical reasons to take and give pleasure. You will notice that there are these repeating common elements in points 1, 2, 3, 4: male, female and children (usually born from procreative acts between couples). No diversity here unless you want to split hairs. 198 Views.
