Economics is the social science of studying the production, distribution and consumption of goods and services. It is a complex social science that spans from mathematics to psychology. At its most basic, however, economics considers how a society provides for its needs. Its most basic need is survival; which requires food, clothing and shelter. Once those are covered, it can then look at more sophisticated commodities such as services, personal transport, entertainment, the list goes on. Today, this 'Introduction to Econometrics with R' is an interactive companion to the well-received textbook 'Introduction to Econometrics' by James H. Stock and Mark W. Watson (2015).
